

QUALITY CHECK

Scenario Testing Checklist

Catch weak openings, drifting characters, dead ends, and continuity crimes before players do.

PDF for easy reading + editable Word edition

Created by **LesBiChaotic**

How to use this

Run one focused test at a time. Mark what happened, copy useful evidence, and change only what the test actually exposed.

Best used when: a scenario exists and needs honest pressure-testing.

Opening and momentum

- The first message establishes place, pressure, and who is present.
- The player has something meaningful to respond to immediately.
- The opening avoids an encyclopedia dump.
- At least three plausible next moves are possible.
- The scene does not force the player's feelings or actions.

Evidence or problems found

What will I change?

Character distinction

- Each major character has a recognizable voice.
- Characters want different things and create different pressure.
- Attraction is not the only source of personality.

- Characters remember their relationships and current conflicts.
- No character quietly merges with another after several messages.

Evidence or problems found

What will I change?

Continuity and memory

- Names, pronouns, roles, injuries, promises, and locations remain stable.
- Memory cards contain one clear topic each.
- Important facts are retrieved when relevant.
- The scenario does not repeat remembered facts unnaturally.
- New developments can be summarized without overwriting canon.

Evidence or problems found

What will I change?

Pacing and long-game fuel

- The story can produce scenes beyond the first conflict.
- Quiet scenes still change a bond, plan, clue, or risk.
- Escalation feels earned instead of random.
- Characters initiate events instead of waiting for the player forever.
- Multiple routes remain meaningfully different.

Evidence or problems found

What will I change?

Safety and labels

- Player role and pronouns are stated accurately.
- Content warnings match what can actually occur.
- Romance and intimacy boundaries are clear.
- Consent is handled consistently with the intended tone.
- Deliberately excluded content stays excluded.

Evidence or problems found

What will I change?

Release check

- All external links open correctly.
- Cover and banner crops work on phone and desktop.
- Spelling and formatting have been checked.
- The project hub and content guide agree with the scenario.
- The version and update date are recorded.
